

Press Release - 18th of February 2008

“WHAT YOU NEED TO KNOW”

The emphasis in this year's Radio Solutions conference is on the European regulations for Short Range Radio Devices: how manufacturers can get their products onto the market. Some important changes have taken place since the last Radio Solutions was held, and routes to compliance can seem complex. This conference is a unique opportunity to hear from the regulators themselves what the requirements are, with practical advice from one of the leading Test Houses.

What is the future for licence-exempt spectrum? The LPRA is proud to include two European commissioners in the programme to address this question – and what they say could surprise most in the industry!

The rest of the programme is now complete. Sector updates include:

- RFID
- Intelligent Transport Systems
- Automatic Meter Reading
- Wireless Medical Devices
- Home Automation
- Cordless audio & radio microphones

New developments in low power radio technology will be covered by experts from around Europe in the following fields:

- Trends in RF design
- Trends in ultra-low-power RF IC design
- Automotive short-range radar (24 + 79 GHz)
- The latest in antenna design
- Processor extensions for software-defined radio

A separate one-day radio design workshop is offered as a practical guide to using a commercial RF IC in the SRD bands, and an exhibition will run alongside the conference on May 29-30th.

Another obvious attraction is the venue: the south of France in May. The event will be held at the ETSI Headquarters in Sophia Antipolis, near Nice. Discounted hotel rates are available for delegates.

Radio Solutions is sponsored by the Low Power Radio Association (LPRA). For more information and booking form see www.lpra.eu or contact the organizer: stella@stiegeler.f2s.com.
